

Math Agenda

1. Go for a walk with your child.
2. Pick a color and count how many things you can see that are that color.
3. You can count cars, trucks, dogs, cats...
4. An extension of this could be writing down different numbers when you get home. I.e. We found 12 dogs.

***You can play this in the house. You can also turn it into “I Spy” after you have done some counting
