

NUMBER RECOGNITION RELAY

What you'll need:

- Cards with numbers on them (you can make these at home)

3 year olds- Number AND correlating number of dots on the cards- Example: 3 (3 dots)- that way they can count the dots to figure out the number. Work on numbers 1-5 (you can go higher if your child wants a challenge)

4 year olds- just the number on the card- unless you'd like to add dots if they are struggling with number recognition. Work on numbers 1-12 (you can go higher if your child wants a challenge)

- Toys or objects- they can be different kinds of toys or objects

Object of the game!

You can play this outside- it would be a lot of fun for the kids to run from side to side- I do not recommend doing all of the numbers and groups at once- maybe 5 different numbers and groups at a time.

1. On one side of the yard, have the cards- out of order, on the other side of the yard, have groups of toys spread out with different amounts of toys in each group.
2. The object of the game is for the child to run to the other side and get a number, run back and figure out which group that number correlates with, and then run back to get another number and repeat the same process.
3. When the child runs out of cards, check their work, put the cards back that they got wrong, that way they have to correct themselves 😊 HAVE FUN!
