

ROLL AND COVER

What you'll need: paper, marker, items to cover numbers, dice- or a deck of cards

3's: dice is preferred- if you don't have dice you can use the dice roller on google

If you do not have two dice the google dice roller also has an option to add two: just click on the color of dice 😊 it does show the answer so it may need to be covered

1. First an adult or older sibling will write numbers 2-12 on a piece of paper spread out, you can make designs around the number.
2. Your child will roll the dice, state how many dots are in all and find the number on the sheet. They will then cover the number with an object.
3. The object of the game is to try and cover all the numbers with objects.

If students struggle recognizing numbers, minimize their choices. (Is it this number or this number?)
