

BUBBLE PRINTING

Step ONE: put a small amount of water into your bowl, like about $\frac{1}{4}$ full.

Step TWO: drop some dish soap in the bowl of water...more dish

soap, the more bubbles you will get.

Step THREE: stir the soap and water mix with the straw and then drop in some food coloring drops or tempera paint (start with one color).

Step FOUR: use the straw to blow bubbles into the water/soap/color mix. (Don't suck it up, ahh!)

Step FIVE: blow bubbles up until they reach above the edge of the bowl...you can also move the straw around in the bowl to create bubbles.

Step SIX: dab your thick paper on the bubbles and make more bubbles and keep dabbing your paper in them.

Step SEVEN: add some more food coloring/paint to change the color of the bubbles or use more bowls to make more colors!

Step EIGHT: keep making bubble and dabbing papers until you get what you want. Then, let the papers dry...and see how they turned out!
